WEATHER SYNOPSIS BY REGION

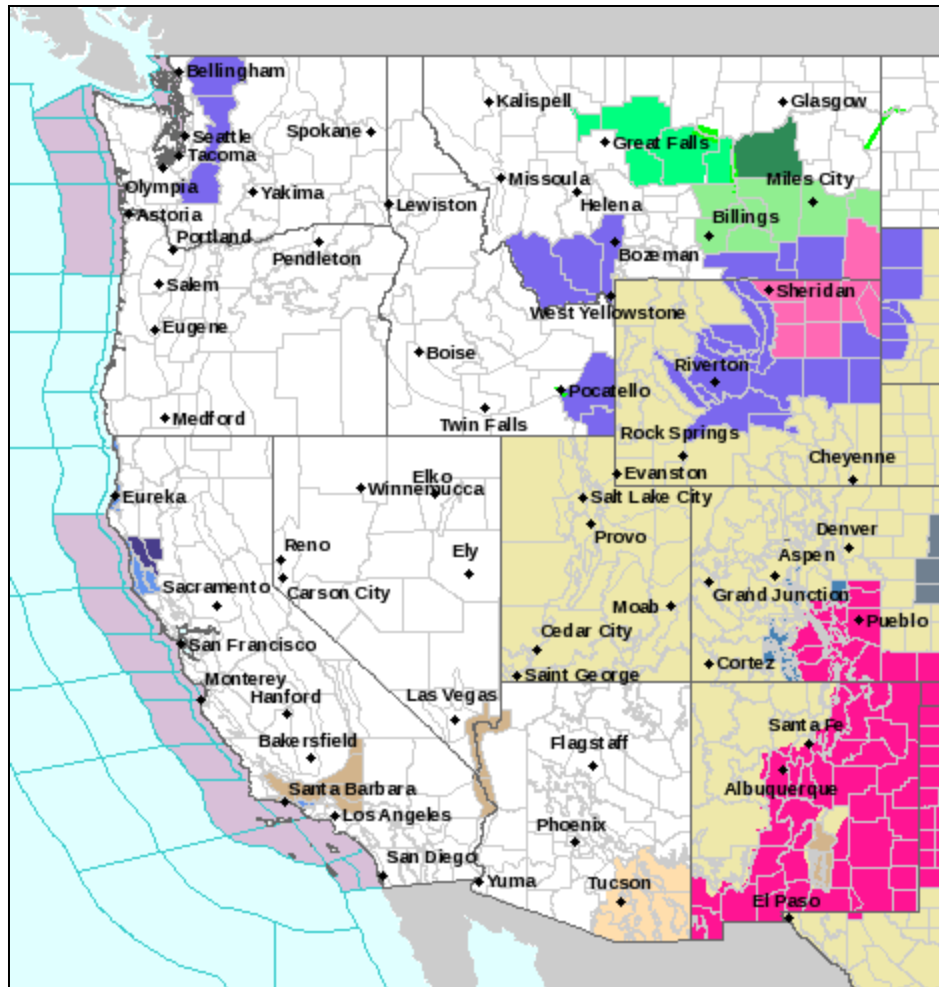

NORTHERN CALIFORNIA

Tonight showers will end around sunset. Skies are expected to be mainly clear across the region allowing for good radiational cooling. The valleys will likely see fog and low clouds form from the recent rain and this may keep some valleys a bit warmer. Still it looks like near freezing to freezing temperatures are likely across much of the region. Later tonight a weak frontal boundary is expected to bring some clouds and a chance for light rain to Del Norte County which is expected to keep frost from forming there. Frost advisories have been issued for the Humboldt and Mendocino County coasts as well as the southern interior of Mendocino County. Northern Mendocino County looks slightly colder so have a freeze warning there. The upper level trough has started to move out of the area this morning, however there are still quite a few showers across the area. The showers are fairly light and no thunder is expected this morning. This afternoon shower coverage may increase slightly due to daytime heating, especially over the inland areas.

SOUTHERN CALIFORNIA

Onshore flow will continue cooler weather, more inland clouds, and gusty westerly winds over the mountains and deserts today. Conditions will be fair, dry, and warmer this week with temperatures climbing back above average by Wednesday. A north flow pattern will bring gusty north to northeast winds near the coastal foothills of San Bernardino County and the Santa Ana Mountains on Tuesday. A weak trough of low pressure may move inland across California next weekend for some cooling, and a return of coastal low clouds.
